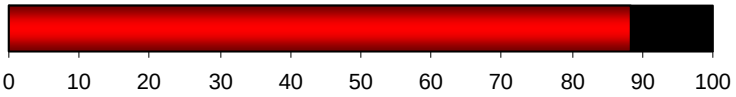
GAYLORD

Medical Program
Fact Sheet

Over the past five years, Gaylord has helped over 1500 through our Medical Program. Patients come to the hospital from all areas of the Northeast to experience the strength of our clinical team and our dedication to positive patient outcomes. Today that tradition continues with 88% of our patients recommending Gaylord's Medical Program.

% Patient Satisfaction

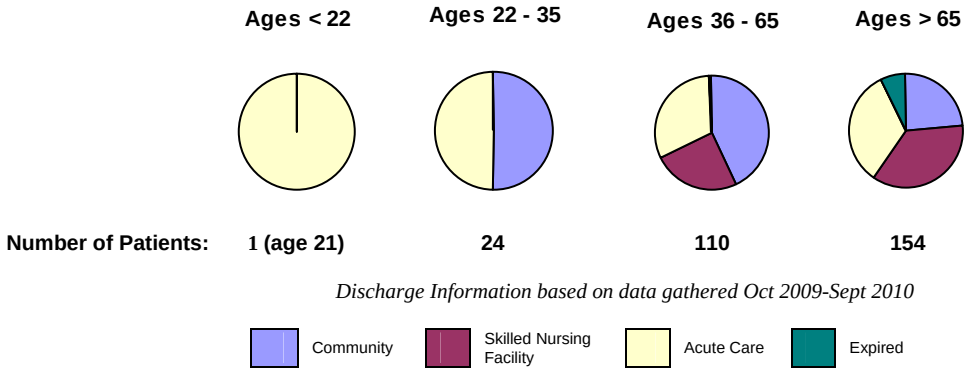


The strength of our Medical Program is rooted in our interdisciplinary approach to patient care. Each patient care team is led by a physician and is expanded to include appropriate clinical representation based on the needs of the patient. These disciplines may include representatives from Nursing, Respiratory Therapy, Speech-Language Pathology, Occupational Therapy, Physical Therapy, Care Management, Nutritional Services, Psychology, and Therapeutic Recreation.

Members of our expert clinical team work in partnership with each patient and family to create an individualized plan of care. As clinicians, we feel it is important that each patient participates in the development of this plan by sharing concerns and providing input toward their goals. Through interactive discussion, we strive to optimize the person's health and physical condition.

Through hard work, determination, and perseverance we have successfully helped many of our patients meet their goals. When asked if our program and staff assisted them in achieving their goals, 88% of patients responded positively. Usually, our patients' goal is to return to their home environment. When this is not possible, we call upon the experience and expertise of our clinical team to help each patient transition to the next level of care.

Discharge Location by Age Group



By following our mission, "to preserve and enhance a person's health and function", Gaylord Hospital has positively influenced the lives of many patients over the years. Our environment of compassion and clinical excellence rank us among the leaders in medical rehabilitation and help to make us "Care Beyond the Ordinary".
