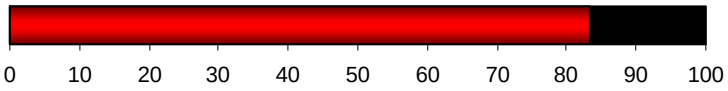
GAYLORD

Brain Injury Program
Fact Sheet

Over the past five years, Gaylord has helped nearly 800 patients through its Brain Injury Program. Patients come to the hospital from all areas of the Northeast to experience the strength of our clinical team and our dedication to positive patient outcomes. Today that tradition is continues with 83% of our patients recommending Gaylord's Brain Injury Program.

% Patient Satisfaction



At the heart of our Brain Injury Program is our interdisciplinary team. The members of our team include Rehabilitation Nursing, Occupational Therapy, Physical Therapy, Speech-Language Pathology, Care Management and Medical Staff. The team may also include Psychology, Nutritional Services, Respiratory Therapy and Therapeutic Recreation.

Our expert clinical team works in partnership with each patient and family to provide an individualized plan for rehabilitation. Each plan is designed to optimize the person's level of function including mobility, dressing, eating, memory, comprehension and communication. In order to accomplish these goals, each patient receives a range from 1-3 hours of therapy per day based on his/her ability to participate and the parameters of their program.

When asked if our program and staff assisted them in achieving their goals, 90% of patients responded positively. Although many view successful rehab as a discharge directly to home, this is not always possible. We call upon the experience and expertise of our clinical team to make the best possible discharge destination a reality. Through hard work, determination, and perseverance we have successfully helped the majority of our patients return to the community.

Discharge Location by Age Group

	Ages < 22	Ages 22 - 35	Ages 36 - 65	Ages > 65
Number of Patients:	14 (age 14-21)	10	81	39

Discharge Information based on data gathered Oct 2009-Sept 2010

Community | Skilled Nursing Facility | Acute Care | Expired

By following our mission, "to preserve and enhance a person's health and function", Gaylord Hospital has positively influenced the lives of many patients over the years. Our environment of compassion and clinical excellence rank us among the leaders in brain injury rehabilitation and help to make us "Care Beyond the Ordinary".
